WHY IS A GOOD NIGHT'S SLEEP SO ESSENTIAL?

• LEARNING AND MEMORY:

Sleep helps the brain to retain memory and new information through a process called Memory Consolidation. Studies show that people who had a comfortable sleep after learning new information did better in tests later.

• METABOLISM AND WEIGHT:

Chronic sleep deprivation may cause weight gain by affecting the way our bodies process storage of carbohydrates and by altering hormone levels that directly affect the appetite.

• SAFETY:

Sleep deprivation leads to a higher tendency to fall asleep during the daytime. These lapses may cause mistakes such as medical errors, air traffic mishaps and road accidents.

• HEALTH:

Sleep deprivation suppresses immunity by lowering the activity levels of the body cells that fight infection.
